**CIRCUIT BREAKER PRODUCT MANUAL**

# VOZWEI

## Brief Introduction

VOZWEI is a dual drive company driven by technology and client's demand, focusing on people's electricity safety and striving to contribute to the development of green energy. We specialize in the research and development, production, sales, and service of terminal electrical apparatus, electrical distribution apparatus, and control electrical apparatus, such as miniature circuit breakers, molded case circuit breakers, Air circuit breakers, DC contactors, and other electrical products.

Since its establishment, VOZWEI has adhered to the core value of "achieving clients" and driven product research and development based on client's needs. We focus on telecommunication, solar energy, and wind power applications, etc. relying on the manufacturing advantages of China's industry and the excellent cost control and quality management advantages of our team to achieve cost control for clients, while ensuring the business philosophy of providing high-quality electrical products and solutions. At present, our products have involved in dozens of countries and regions such as Germany, France, Italy, Britain, Brazil, Argentina, Colombia, Canada, Israel, Thailand, Vietnam, South Korea, India, etc.

**Telecom**

**Solar  
Energy**

**Wind  
Power**

## Corporate Cultures

### **Our Vision**

Pursuing excellence, creating the electrical future of a safer, more reliable and smarter

### **Our Mission**

Steady development, bring the electric products of premium quality at reasonable prices to world

### **Core values**

Value, Reliability, Efficiency, Innovation, Low-carbon, Vitality

### **Work Philosophy**

Relying on responsibility and diligence to aim at perfection, respect everyone, and happiness comes from striving

Air Circuit Breaker

- Tailored for solar energy, wind power and energy storage systems
- High-voltage air circuit breaker, optional 800V AC, 1140V AC, 1250V AC, 1500V AC
- With ultra-high breaking capacity, max meet 85kA at 800V AC
- With excellent anti damp heat and dew solidification capabilities
- Strong ability to adapt to alternating changes in high and low temperatures
- Strong resistance to salt spray and humid environments
- High altitude adaptability, still safe working at an altitude of 5000 meters
- Can be used in complex mixed gas environments (Cl<sub>2</sub>, SO<sub>2</sub>, NO<sub>2</sub>, H<sub>2</sub>S)
- Low energy consumption and temperature rise of the product itself
- Integrated communication network, capable of remote control, telemetry, remote signaling, and remote adjustment

## Ambient conditions

---

### Operating ambient temperature/storage temperature

- Operating environment temperature:-40°C- +70°C

### Altitude conditions

- Altitude of installation site ≤ 5000m (Over 2000 meters need capacity reduction for using)

### Shockproof level

- Passed the impact test with a peak acceleration of 30g and three axes and six directions
- Passed the vibration test with an acceleration of 10g and a frequency of 10-200Hz
- Excessive vibration may cause component damage and affect the reliable operation of the circuit breaker

### Corrosion prevention

- Passed the C4-H level anti-corrosion test specified in ISO12944-6 and GB/T 30790.6-2014 standards

- Note:**
- ①. VWC4 (V) power measurement only have active power;
  - ②. VMC2 only have fault type,VWC4/VWC4(V) only have the record of last one fault type and data value;
  - ③. Record the displacement include: displacement type (closing, opening, or tripping), displacement reason (local/remote operation, fault/test tripping), displacement time (year, month, day, hour, minute, second);
  - ④. Record the alarm history: Alarm type, alarm domain value, alarm time (year, month, day, hour, minute, second);
  - ⑤. Trip parameters: trip type, trip domain value, delay time, current or voltage value, time (year, month, day, hour, minute, second), MCR trip, undervoltage trip, except for HSISC trip;
  - ⑥. "✓"represents with this function, "—"represents without this function, "■"represents optional function;
  - ⑦. V and P function type are optional;
  - ⑧. If selected the unit function, that will be achieved alarm and switch output functions or area selective interlocking functions.

## VWC2 Controller

### Standard function

- Overload long-time delay protection, Short circuit short-time delay protection, Short circuit instantaneous protection
- Function test
- Fault record
- Overload thermal memory
- Self-diagnostic function
- Current bar display
- Fault status indication & Fault value indication

### Optional function

- Ground Fault Protection
- Current unbalance protection
- Signal unit
- MCR & HCISC

- 1 Reset button
- 2 Rated current
- 3 Current bar indicator light
- 4 Fault indicators

- 5 Overload long-time delay protection setting DIP switch

- 6 Short-circuit short-time delay protection setting DIP switch

- 7 Short-circuit instantaneous protection current setting DIP switch

- 8 Ground fault protection setting DIP switch

- 9 Operation indicator
- 10 Overload indicator
- 11 Fault check button
- 12 Test trip button
- 13 Clear indicator button
- 14 Test port

### Note:

1. Move the dial switch by using a special tool (screwdriver for small clocks and watches), so as to make it point to the scale value or position corresponding to protection parameter. When dialing, it should not point to the middle position between two scale values.

2. The protection parameters shall not be cross-set (with the requirement of  $I_r < I_{sd} < I_i$ ).

## VWC2 Controller protection characteristics

Overload long-time delay										
Current setting value $I_r$ , Current tolerance error $\pm 10\%$		$(0.4, 0.5, 0.6, 0.7, 0.8, 0.9, 1.0) \times I_n + \text{OFF}$								
Tripping time $t_r$ tolerance error $\pm 15\%$	Current	Tripping time								
	$\leq 1.05I_r$	Inaction within 2h								
	$> 1.20I_r$	Action within 1h								
	$1.5I_r$	Setting time $t_r$ (s)	15	30	60	120	240	360	480	600
$2.0I_r$	Tripping time $t_r$ (s)	8.4	16.9	33.8	67.5	135	202.5	270	337.5	
$7.2I_r$	Tripping time $t_r$ (s)	0.65	1.3	2.6	5.2	10	15.6	20	26	
Thermal memory protection	30min+OFF (clear the thermal memory when the power off)									
Short-circuit short time-delay										
Current setting value $I_{sd}$ , Current tolerance error $\pm 10\%$		$(1.5, 3, 4, 5, 6, 8, 10) \times I_r + \text{OFF}$								
Tripping time $t_{sd}$ tolerance error $\pm 15\%$	ON: The short-time delay inverse time limit is on	$I_{sd}$	0.1	0.2	0.3	0.4				
	OFF: The short-time delay inverse time limit is off	$(I^2t)$	ON	OFF	ON	OFF	ON	OFF	ON	OFF
Thermal memory protection	30min+OFF (clear the thermal memory when the power off)									
Short-circuit instantaneous protection										
Current setting value $I_i$ , Current tolerance error $\pm 10\%$		$(2, 4, 6, 8, 10, 12, 15) \times I_n + \text{OFF}$								
Tripping time $t_3$		Within 30ms								
Ground fault protection										
Current setting value $I_g$ , Current tolerance error $\pm 10\%$		$(0.2, 0.3, 0.4, 0.5, 0.6, 0.7, 0.8) \times I_n + \text{OFF}$								
Tripping time $t_g$ tolerance error $\pm 15\%$	Fixed time-limit	Setting time $t_g$ (s)	0.2	0.4	0.6	0.8	1	2	3	5

## VWC2 Controller time setting value reference table

DIP switch setting								
tr	15	30	60	120	240	360	480	600
tsd	0.1		0.2		0.3		0.4	
(I <sup>2</sup> t)	ON	OFF	ON	OFF	ON	OFF	ON	OFF
tg	0.2	0.4	0.6	0.8	1.0	2.0	3.0	5.0
tδ	0.1	5	10	15	20	30	40	OFF

## VWC2 Controller current setting value reference table

DIP switch setting								
I <sub>r</sub> (xI <sub>n</sub> )	0.4	0.5	0.6	0.7	0.8	0.9	1.0	OFF
I <sub>sd</sub> (xI <sub>r</sub> )	1.5	3	4	5	6	8	10	OFF
I <sub>i</sub> (xI <sub>n</sub> )	2	4	6	8	10	12	15	OFF
I <sub>g</sub> (xI <sub>n</sub> )	0.2	0.3	0.4	0.5	0.6	0.7	0.8	OFF
I <sub>δ</sub> (%)	40	50	60	70	80	90	100	OFF

**Note:** OFF indicates protection function is deactivated.

## VWC4 Controller

### Standard function

- Overload long-time delay protection, Short circuit short-time delay protection, Short circuit instantaneous protection
- Ground Fault Protection
- Function test
- Fault record
- Overload thermal memory
- Self-diagnostic function
- Current measurement
- Fault status indication & Fault value indication

### Optional function

- Current unbalance protection
- Signal unit
- MCR & HCISC
- Load monitoring
- Voltage measurement
- Contact wear equivalent indication
- Voltage protection
- Current leakage protection
- Power factor measurement
- frequency measurement
- Power measurement
- Electric energy measurement
- Voltage measurement

- ① Rated current
- ② Voltage and Power
- ③ Current
- ④ Setting button
- ⑤ Setup, query indicators
- ⑥ Fault and alarm indicators
- ⑦ Test port

**Note:** Protection parameters must not be cross set,  
 $I_r < I_{sd} < I_{io}$

### Panel Display Description

- “HZ” Lighting on, is frequency
- “S/COS $\Phi$ ” Lighting on, is time; flashing is power factor
- “kW” Lighting on, is active power; flashing is active electric energy
- “%” Lighting on, is contact wear equivalent indication
- “ $\times 10$ ” Lighting on, is number of opening and closing operations
- “ $\delta$ ” “%” and “L1/L2/L3” Lighting on, is the imbalance ratio
- “Ig” and “A/kA” Lighting on, is grounding current
- “L1/L2/L3” and “A/kA” Lighting on, is current
- “N” and “A/kA” Lighting on, is N-phase current
- “A/kA” Flashing is kA, lighting on is A
- One of “V1”, “V2”, “V3” and V lighting on, is three phase line voltage
- One of “V1”, “V2”, “V3” and “N” and “V” lighting on, is corresponding phase voltage
- When the “T” lighting on, have the self-diagnostic fault, press Enter show the fault code
- If the fault is resolved, press the return button to clear self-diagnostic fault, “T” no lighting
- If there are multiple diagnostic faults, press the ▲ and ▼ keys to view the fault codes
- Fault code:

ER01	ER02	ER03	ER12	ER13
E <sup>2</sup> PROM error	A/D error	overtemperature	Circuit breaker refused to operate	contact maintained indication

### Controller running status:

- ① **Setting status:** Set lighting on, view or modify the protection setting value
- ② **Query status:** Query lighting on, view the fault history
- ③ **Test status:** Test lighting on, can do the tripping test
- ④ **Fault status:** Fault lighting on, indication the fault type and cycle display of fault current and time
- ⑤ **Communication status:** Communication lighting on, the controller is communicating
- ⑥ **Storage status:** Storage lighting on, change data once
- ⑦ **Self-diagnostic status:** “T” lighting on, have the self-diagnostic fault

VWC4 Controller protection characteristics

Overload long-time delay protection

Current setting value  $I_r$ , Current tolerance error  $\pm 10\%$  (0.4~1.0)  $\times I_n$ +OFF (step 1A)

Tripping time $t_r$ tolerance error $\pm 15\%$	Current	Tripping time							
	$\leq 1.05I_r$	Inaction within 2h							
	$> 1.20I_r$	Action within 1h							
	Protection curve (default is $I^2T$ )	Tripping time $t_r$ (factor K in bracket)							
	Standard inverse time limit $t=K/(N^{0.02}-1)$	0.61(0.005)	0.98(1.0)	1.47(0.012)	2.46(0.02)	3.68(0.03)	4.91(0.04)	6.14(0.05)	8.29(0.075)
	Fast inverse time limit $t=K/(N-1)$	2(1)	3.2(1.6)	4.8(2.4)	8(4)	12(6)	16(8)	20(10)	27(13.5)
	Express inverse time limit $t=K/(N^2-1)$	8(10)	12.8(16)	19.2(24)	32(40)	48(60)	64(80)	80(100)	108(135)
	Express inverse time limit $t=(K/1.15) \times \log_e [N^2 / (N^2-1.15)]$	112(180)	174(280)	249(400)	373(600)	498(800)	622(1000)	747(1200)	871(1300)
	High-voltage fuse compatible $t=K/(N^4-1)$	2.46(10)	3.94(16)	5.9(24)	9.85(40)	14.8(60)	19.7(80)	24.6(100)	33.2(135)
	$I^2T$ Table $t=(1.5/N)^2 \times K$	15(15)	30(30)	60(60)	120(120)	240(240)	360(360)	480(480)	600(600)

**Note:**  $N=I/I_r$  ( $I$  is the actual fault current,  $I_r$  is the set value of overload current).  
The above set time value is action delay time when  $I=1.5I_r$ , with the of current  $I$  increase, the delay time will be decreases which can be calculated according to the curve formula.

Thermal memory protection 30min+OFF (clear the thermal memory when the power off)

Short-circuit short time-delay protection

Current setting value  $I_{sd}$ , Current tolerance error  $\pm 10\%$  (1.5~15)  $\times I_r$ +OFF (step 1A)

Tripping time $t_{sd}$ tolerance error $\pm 15\%$	Fixed time-limit current setting value	0.1~1s (step 0.1s)
	Inverse time-limit current setting value	The curve is the same as the overload long delay curve, and the curve speed is 10 times faster than the overload long delay (dividing the time calculated by the overload delay curve formula by 10 is the inverse delay time of the short delay)

Thermal memory protection 15min+OFF (clear the thermal memory when the power off)

**Note:** When both the inverse time limit and fixed time limit protection are enabled, the inverse time limit current setting value must be less than the fixed time limit current setting value, otherwise the inverse time limit function will automatically fail. In addition, the actual delay time is not less than the set time of the fixed time limit

Short-circuit instantaneous protection		
Current setting value $I_i$ , Current tolerance error $\pm 10\%$		$(1\sim 20) \times I_n + \text{OFF}$
Action features		$\leq 0.85 I_i$ , inaction
		$> 1.15 I_i$ , action
Ground protection		
Current setting value $I_r$ , Current tolerance error $\pm 10\%$		$(0.2\sim 1.0) \times I_n + \text{OFF}$ (min100A)
Action features		$\leq 0.8 I_g$ , inaction
		$\geq 1.0 I_g$ , delay action
Tripping time $t_g$ tolerance error $\pm 10\%$	Fixed time-limit	0.1~100s+OFF (0.1~1s, step0.1s, 1s~100s, step1s, OFF: alarm does not trip)
	Inverse time shear coefficient $C_r$	1.5~6+OFF (step 0.5, OFF: inverse time-limit OFF)
	Inverse time-limit formula	Formula $t = t_g \times C_r \times I_g / I$ t - Delay time; $T_g$ - Set delay time; $C_r$ - Shear coefficient; $I_g$ - Set action current; I - Ground current; When the multiple of fault current ( $I/I_g$ ) is less than $C_r$ , the action characteristic is inverse time characteristic; When the fault current multiple is greater than or equal to $C_r$ , the action characteristic is a fixed time limit
Neutral line protection		
Current setting value $I_n$ , Current tolerance error $\pm 10\%$		$(0.5, 1.0) \times I_n + \text{OFF}$
Action time		same as long time-delay time
Current unbalance protection		
Protection setting value		40%~100%+OFF
Action or alarm features		$\leq 0.9 \delta$ , inaction
		$> 1.1 \delta$ , action delay or alarm
Delay time (s)		0.1~100s+OFF (OFF: Alarm only, inaction, step0.1s)
Load monitoring function		
Mode 1	Current setting $I_{c1}$ , $I_{c2}$ Adjustment(A)	$(0.2\sim 1.0) \times I_n + \text{OFF}$ (min100A)
	Inverse time-limit $t_{c1}$ , $t_{c2}$ (s)	Same overload long delay curve
Mode 2	Current setting $I_{c1}$ , $I_{c2}$ Adjustment(A)	$(0.2\sim 1.0) \times I_n + \text{OFF}$ (min100A)
	Inverse time-limit $t_{c1}$	Same overload long delay curve
	Fixed time-limit $t_{c2}$	60s

## VWC6 Controller

### Standard function

- Overload long-time delay protection, Short circuit short-time delay protection, Short circuit instantaneous protection
- Ground Fault Protection
- Function test
- Fault record
- Overload thermal memory
- Self-diagnostic function
- Current measurement
- Fault status indication & Fault value indication
- Contact wear equivalent indication
- Record of operations

### Optional function

- Current unbalance protection
- Signal input
- Signal unit
- MCR & HCISC
- Load monitoring
- Power measurement
- Voltage measurement
- Voltage protection
- Current leakage protection
- Required value protection
- Power factor measurement
- Electric energy measurement
- Selective area interlock
- Harmonics measurement
- Frequency measurement
- Reverse power measurement
- Electric energy measurement
- Communication

**Note:** Protection parameters must not be cross set,  
 $I_r < I_{sd} < I_{i0}$

- ① LCD interface display
- ② Protection curve
- ③ Function buttons
- ④ Fault and alarm reset button
- ⑤ Fault alarm indicators
- ⑥ Normal indicators
- ⑦ Communication indicators
- ⑧ Test port

## VWC6 Controller protection characteristics

### Overload long-time delay protection

Current setting value  $I_r$ , Current tolerance error  $\pm 10\%$  (0.4~1.0)  $\times I_n + \text{OFF}$  (step 1A)

Current	Tripping time							
	$\leq 1.05I_r$	Inaction within 2h						
$> 1.20I_r$	Action within 1h							
Protection curve (default is $I^2T$ )	Tripping time $t_r$ (factor K in bracket)							
Standard inverse time limit $t = K / (N^{0.02} - 1)$	0.61(0.005)	0.98(1.0)	1.47(0.012)	2.46(0.02)	3.68(0.03)	4.91(0.04)	6.14(0.05)	8.29(0.075)
	11.1(0.09)	17.2(0.14)	24.6(0.2)	36.8(0.3)	49.1(0.4)	61.4(0.5)	73.7(0.6)	86(0.6)
Fast inverse time limit $t = K / (N - 1)$	2(1)	3.2(1.6)	4.8(2.4)	8(4)	12(6)	16(8)	20(10)	27(13.5)
	36(18)	56(28)	80(40)	120(60)	160(80)	200(100)	240(120)	280(140)
Express inverse time limit $t = K / (N^2 - 1)$	8(10)	12.8(16)	19.2(24)	32(40)	48(60)	64(80)	80(100)	108(135)
	144(180)	224(280)	320(400)	480(600)	640(800)	800(1000)	960(1200)	1120(1300)
Express inverse time limit $t = (K / 1.15) \times \log_e [N^2 / (N^2 - 1.15)]$	6.22(10)	9.96(16)	14.9(24)	24.9(40)	37.3(60)	49.8(80)	62.2(100)	84(135)
	112(180)	174(280)	249(400)	373(600)	498(800)	622(1000)	747(1200)	871(1300)
High-voltage fuse compatible $t = K / (N^4 - 1)$	2.46(10)	3.94(16)	5.9(24)	9.85(40)	14.8(60)	19.7(80)	24.6(100)	33.2(135)
	44.3(180)	68.9(280)	98.5(400)	147(600)	197(800)	246(1000)	295(1200)	344(1300)
$I^2T$ Table $t = (1.5/N)^2 \times K$	15(15)	30(30)	60(60)	120(120)	240(240)	360(360)	480(480)	600(600)
	720(720)	840(840)	960(960)	/	/	/	/	/

**Note:**  $N = I / I_r$  ( $I$  is the actual fault current,  $I_r$  is the set value of overload current).  
The above set time value is action delay time when  $I = 1.5I_r$ , with the of current  $I$  increase, the delay time will be decreases which can be calculated according to the curve formula.

Thermal memory protection 30min+OFF (clear the thermal memory when the power off)

### Short-circuit short time-delay protection

Current setting value  $I_{sd}$ , Current tolerance error  $\pm 10\%$  (1.5~15)  $\times I_r + \text{OFF}$  (step 1A)

Tripping time $t_{sd}$ tolerance error $\pm 15\%$	Fixed time-limit current setting value	0.1~0.4s (step 0.1s)
	Inverse time-limit current setting value	The curve is the same as the overload long delay curve, and the curve speed is 10 times faster than the overload long delay (dividing the time calculated by the overload delay curve formula by 10 is the inverse delay time of the short delay)

Thermal memory protection 15min+OFF (clear the thermal memory when the power off)

**Note:** When both the inverse time limit and fixed time limit protection are enabled, the inverse time limit current setting value must be less than the fixed time limit current setting value, otherwise the inverse time limit function will automatically fail. In addition, the actual delay time is not less than the set time of the fixed time limit

Short-circuit instantaneous protection		
Current setting value $I_i$ , Current tolerance error $\pm 10\%$	$(1\sim 20) \times I_n + \text{OFF}$ (min100A)	
Action features	$\leq 0.85 I_i$ , inaction	
	$> 1.15 I_i$ , action	
Ground protection		
Current setting value $I_r$ , Current tolerance error $\pm 10\%$	$(0.2\sim 1.0) \times I_n + \text{OFF}$ (min100A)	
Action features	$\leq 0.8 I_g$ , inaction	
	$\geq 1.0 I_g$ , delay action	
Tripping time $t_g$ tolerance error $\pm 10\%$	Fixed time-limit	$0.1\sim 100\text{s} + \text{OFF}$ (0.1~1s, step 0.1s, 1s~100s, step 1s, OFF: alarm does not trip)
	Inverse time shear coefficient $C_r$	$1.5\sim 6 + \text{OFF}$ (step 0.5, OFF: inverse time-limit OFF)
	Inverse time-limit formula	Formula $t = t_g \times C_r \times I_g / I$ t - Delay time; $T_g$ - Set delay time; $C_r$ - Shear coefficient; $I_g$ - Set action current; I - Ground current; When the multiple of fault current ( $I/I_g$ ) is less than $C_r$ , the action characteristic is inverse time characteristic; When the fault current multiple is greater than or equal to $C_r$ , the action characteristic is a fixed time limit
Execution mode: tripping + close		
Ground protection (The ground alarm and ground protection functions are independent of each other and have their own independent parameter settings, which can exist simultaneously)		
Alarm action setting value	current	$(0.2\sim 1.0) \times I_n$ (min100A)
	time	$0.1\sim 100\text{s} + \text{OFF}$
Alarm cleared setting	current	$(0.2\sim 1.0) \times I_n$ (min100A)
	time	$0.1\sim 100\text{s} + \text{OFF}$
Neutral line protection		
Current setting value $I_n$ , Current tolerance error $\pm 10\%$	$(0.5, 1.0, 1.6, 2.0) \times I_n + \text{OFF}$	
Action time	same as long time-delay time	
Current unbalance protection		
Protection setting value	5% ~ 60% (step 1%)	
Delay time	0.1 s ~ 40s (step 0.1s)	
Protection return setting value	5% ~ start value (step 1%)	
Delay time	start value (step 1%)	
Action or alarm features	$\leq 0.9 \delta$ , inaction	
	$> 1.1 \delta$ , action delay or alarm	
Execution mode: Tripping+alarm+close		
Load monitoring function		
Mode 1	Current setting $I_{c1}, I_{c2}$	$(0.2\sim 1) \times I_r$ (min100A, step 1A)
	Inverse time-limit $t_{c1}, t_{c2}$	$(20\%\sim 80\%) \times t_r$
Mode 2	Current setting $I_{c1}$ (unloading)	$(0.2\sim 1) \times I_r$ (min100A)
	Current setting $I_{c2}$ (return)	$0.2 \times I_r \sim I_{c1}$
	Inverse time-limit $t_{c1}$	$(20\%\sim 80\%) \times t_r$
	Fixed time-limit $t_{c2}$	10s~600s

## VWC4 Controller

Voltage unbalance protection				
Protection start setting value	2%~30% (accuracy 1%)			
Protection action delay time setting (s)	0.2~60 (accuracy 0.1)			
Protection action return setting value	2%~start value (accuracy 1%)	This set value only exists when the "alarm" execution method , and the return value must be less than or equal to the start value.		
Protection return delay time (s)	0.2~60 (accuracy 0.1)			
Action features of voltage unbalance protection/alarm (Accuracy of ±10%)	Actual voltage unbalance rate/setting value ≥1.1	Action or alarm according to the set delay time		
	Actual voltage unbalance rate/setting value <0.9	Inaction (no alarm)		
Voltage unbalance alarm return action features(Accuracy of ±10%)	Actual voltage unbalance rate/setting value ≤0.9	Returns according to the set delay time		
	Actual voltage unbalance rate/setting value >1.1	Non-return		
Voltage unbalance protection alarm DO output	Added the "Voltage Unbalance Alarm" contact output when the alarm execution mode			
Undervoltage protection				
Action setting value(V)	100~return setting value(step 1)			
Protection action delay time setting value(s)	0.2~60(step 0.1)			
Action return setting value (V)	action setting value~1200(step 1)	This set value only exists when the "alarm" execution method , and the return value must be less than or equal to the start value.		
Protection action delay time setting value(s)	0.2~60(step 0.1)			
Action features of voltage unbalance protection/alarm (Accuracy of ±10%)	U <sub>max</sub> / action setting value<0.9	Action or alarm according to the set delay time		
	U <sub>max</sub> / action setting value≥1.1	Inaction (no alarm)		
Undervoltage alarm return action features (Accuracy of ±10%)	U <sub>min</sub> / action setting value>1.1	Returns according to the set delay time		
	U <sub>max</sub> / action setting value≤0.9	Non-return		
Undervoltage protection alarm DO output	Added the "Undervoltage Alarm" contact output when the alarm execution mode			
Overvoltage protection				
Action setting value(V)	return setting value~1200 (step 1)			
Protection action delay time setting value(s)	0.2~60 (step 0.1)			
Action return setting value (V)	100~action setting value (step 1)	This set value only exists when the "alarm" execution method , and the return value must be less than or equal to the start value.		
Return action delay time setting value(s)	0.2~60 (step 0.1)			
Action features of overvoltage protection/alarm (Accuracy of ±10%)	U <sub>min</sub> / action setting value≥1.1	Action or alarm according to the set delay time		
	U <sub>min</sub> / action setting value<0.9	Inaction (no alarm)		
Overvoltage protection alarm return features (Accuracy of ±10%)	U <sub>max</sub> / action setting value≤0.9	Returns according to the set delay time		
	U <sub>max</sub> / action setting value>1.1	Non-return		
Overvoltage protection alarm DO output	Added the "Overvoltage Alarm" contact output when the alarm execution mode			
Required current value protection				
Protection start setting value	(0.2~1.0) × I <sub>n</sub> (step 2)			
Protection action delay time setting value(s)	15~1500 (step 1)			
action return setting value	0.2I <sub>n</sub> ~start value (step 2)	This set value only exists when the "alarm" execution method , and the return value must be less than or equal to the start value.		
Return action delay time setting value(s)	15~3000 (step 1)			
Action features of required current value protection protection/alarm (Accuracy of ±10%)	I /setting value≥1.1	Action or alarm according to the set delay time		
	I /setting value<0.9	Inaction (no alarm)		
Voltage unbalance alarm return action features(Accuracy of ±10%)	I /setting value≤0.9	Returns according to the set delay time		
	I /setting value>1.1	Non-return		
Required current value protection alarm DO output	Added the "Required current value protection" contact output when the alarm execution mode			
Phase sequence protection				
Setting range of action phase sequence	△φ: A, B, C / △φ: A, C, B			
Phase sequence protection alarm DO output	Added the "Phase sequence protection" contact output when the alarm execution mode			
Execution mode	Alarm/tripping/close			
Underfrequency, overfrequency protection				
Start setting value	Action start setting value	underfrequency	45~return value (step 0.5Hz)	This setting value only exists when the "alarm" execution mode
		overfrequency	return value~65 (step 0.5Hz)	
	Action delay time setting value (s)	0.1~5s+OFF (0.1~1s step 0.1, 1~5s step 1s)		
	Alarm action return setting value (Hz)	underfrequency	start value~65Hz (step 0.5Hz)	
overfrequency		45Hz~Start value (step 0.5Hz)		
Alarm return delay time (s)	0.2~36.0s (step 0.1s)			
	Added the "Underfrequency, overfrequency protection alarm" contact output when the alarm execution mode			
Underfrequency, overfrequency protection alarm DO output	Added the "Underfrequency, overfrequency protection alarm" contact output when the alarm execution mode			
Execution mode	Phase sequence protection alarm Alarm/tripping/closeDO output			

## Controller protection function description

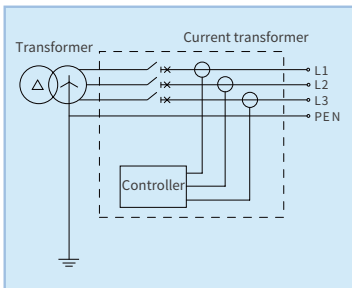

### Ground fault protection features

### Ground fault protection

- Current setting value  $I_g$  adjustable, when fixed or inverse time limit ground fault protection
- Delay time  $t_g$  adjustable
- Turning off (OFF), only alarm, no tripping
- Ground protection type
- Type 1
- Type 2
- Type 3
- Type 4

#### Type 1

**Type1: The TN-C and TN-C-S distribution systems use three-pole circuit breakers without neutral current transformers.**

- The ground fault protection signal from the vector sum of the three-phase current.
- The protection feature is fixed limit time or inverse limit time protection
- Only applicable when the three-phase unbalanced current and harmonic current flowing through the PEN neutral protection line are very small

#### Type 2

**Type 2: The TN-S distribution system use four pole circuit breaker with internal neutral current transformer.**

- The ground fault protection signal from the vectors sum of the three-phase current and N-phase current .
- The protection feature is fixed limit time or inverse limit time protection

#### Type 3

**Type 3: The TN-S distribution system use three-pole circuit breaker and external neutral current transformer.**

- The ground fault protection signal from the vectors sum of the three-phase current and N-phase current .
- The protection feature is fixed limit time or inverse limit time protection

**Note:** The transformer wire length shall not exceed 2m

#### Type 4

**Type 4: The T-T distribution system use three-pole circuit breaker and external ground current transformer.**

- The ground fault protection signal from the current on the grounding wire at the center point of the low-voltage terminal of the transformer
- The protection feature is fixed limit time or inverse limit time protection

**Note:** The transformer wire length shall not exceed 2m

## Signal unit

### DI: input

1-2 programmable optoelectronic coupling switch input (DI)

Function setting	General,alarm, tripping, regional interlocking, grounding interlocking, short circuit interlocking	
DI Input form	Normally open	Normally closed

### DO: output

2-4 Switch Output (DO)

Function setting	See the table below, "Parameter Settings of Switch Output (DO)"			
Execution mode	Normally opened level	Normally closed level	Normally opened Impulse	Normally closed Impulse
Impulse time	N/A		1~360s (step 1s)	

### Parameter Settings of Switch Output (DO)

General	Alarm	Fault tripping	Self-diagnostic function alarm	Instantaneous fault
Grounding/current leakage fault	Overload pre-alarm	Overload fault	Short-time delay fault	Undervoltage fault
Overvoltage fault	Grounding/leakaging alarm	Current unbalance fault	Neutral line fault	Required value fault
Reverse power fault	Voltage unbalance fault	Underfrequency fault	Overfrequency fault	Phase sequence fault
MCR/HSISC fault	Short circuit interlocking	Remote On	Remote Off	Required value out-of-limit
A-phase required value fault	B-phase required value fault	C-phase required value fault	N-phase required value fault	/

**Note:** The general table function can be setting on the computer in the communication group,when the DI/DO not be setting in the controller

## Communication

Communication type controller connects to the communication products ,achieve the remote communication, remote regulating, remote control and remote sensing functions,for monitor the circuit breaker working on time.As "Communication Networking Diagram" showing, achieved the local monitoring and ultra remote monitoring to monitor the operating status of circuit breakers and control them on time

The specific configuration and communication interface parameters as the below table show:

Applicable controller	VWC4 , VWC6 (Communication)	
Communication mode	RS485(Photoelectric isolation)	
Communication cable	Shielded twisted pair cable	
Communication distance	1200m <sup>(1)</sup>	
Communication protocol	Standard	Modbus-RTU
	Optional	Profibus-DP or DeviceNet Accessories required: Profibus-DP conversion module or DeviceNet conversion module
Communication instructions	《PTU series intelligent controller Modbus communication protocol V3.0》	
Transmission rate (bit/s)	9.6K , 19.2K , 38.4K (Settable)	
Communication address	0~255 (Settable)	
The 'remote control' function requires additional accessories <sup>(2)</sup>	1) 201 Relay module; 2) power supply module	
When connecting the monitoring system (RS232 interface) with the system, accessories <sup>(3)</sup> are required	RS485/RS232 conversion module	
When connecting the monitoring system (Ethernet interface) with the system, accessories are required	(ModBUS / TCP / IP) Ethernet conversion module	

**Note:** (1).When the bus length exceeds 1200 meters, additional a "communication relay module";  
 (2).Achieve the remote communication, remote regulating, remote control and remote sensing functions without additional accessories  
 (3).When monitor system have the RS485 interface,no need "RS485/RS232 conversion module"

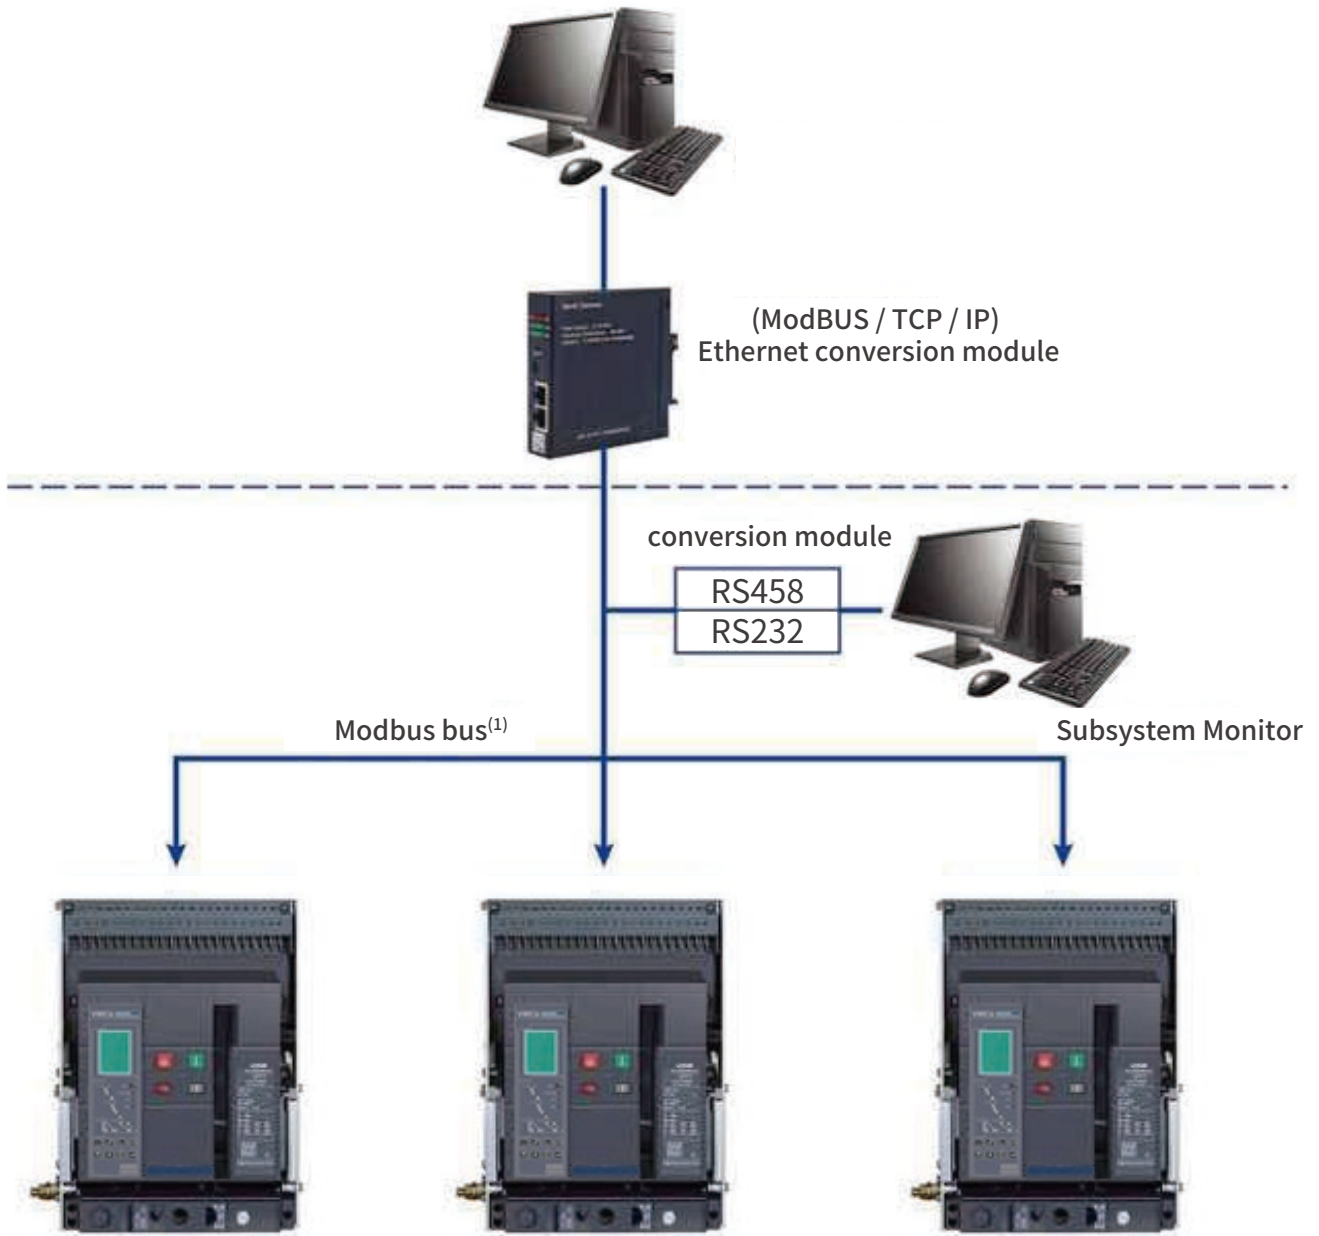

## Controller factory setting

Overload long-time delay protection	I <sub>r</sub>	I <sub>n</sub>
	t <sub>r</sub>	60s
Short circuit short-time delay protection	I <sub>sd</sub>	3I <sub>r</sub>
	t <sub>sd</sub>	0.1s
Short circuit instantaneous protection	I <sub>i</sub>	6I <sub>n</sub>
Ground Fault Protection	I <sub>g</sub>	OFF
Current unbalance protection	OFF	
Neutral line protection	100%I <sub>r</sub>	
Current unbalance protection	OFF	
Undervoltage protection	OFF	
Overvoltage protection	OFF	
Required current value protection	OFF	
Phase sequence protection	OFF	
Underfrequency, overfrequency protection	OFF	
MCR	VW3-20(S/H)	20kA
	VW3-25(H/HU/HV)	30kA
	VW3-40(H/HU/HV)	45kA
	VW3-63(H/HU/HV)	75kA
HSISC	VW3-20(S/H)	OFF
	VW3-25(H/HU/HV)	OFF
	VW3-40(H/HU/HV)	OFF
	VW3-63(H/HU/HV)	OFF

Contact factory setting				
	Contact 1	Contact 2	Contact 3	Contact 4
VWC2/VWC4/VWC6	Overload fault output	Fault tripping output	Self-diagnostic function alarm	Fault tripping
VWC6 (Communication)			Remote Off	

## Main network communication

**Note:** (1) When the bus with Profibus-DP or DeviceNet, need to be converted by Profibus-DP or DeviceNet conversion module

## Controller

VW3-25 (H/HU/HV)  
VW3-40 (H/HU/HV)

Controller	Controller mode	Supply voltage Ue (V)
	VWC2	AC65~500V, DC80~700V
	VWC4	
	VWC6	
	VWC6 (Communication)	

## Motor operating mechanism (D)

The circuit breaker has motor energy storage and automatic energy re-storage function (also energy storage by manual)

Rated control supply voltage $U_s$ (V)		AC230	AC400	DC110	DC220
Operation voltage		(0.85~1.1) $U_s$			
Power consumption	VW3-20 (S/H)	100VA		100W	
	VW3-25 (H/HU/HV)	150VA		150W	
	VW3-40 (H/HU/HV)	150VA		150W	
	VW3-63 (H/HU/HV)	190VA		190W	
Energy storage time(s)		5s			

## Closed electromagnet (B)

After the energy storage is completed, closed electromagnet release the operating mechanism energy, make the circuit breaker quickly closed.

Power Consumption Table of Closed Electromagnet

Rated insulation voltage(Ui)	Rated control supply voltage(Us)	Closed current		Instantaneous power	
		VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)	VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)
400V	AC380V/AC400V	1A	2.1A	360VA	780VA
	AC220V/AC230V	1.3A	2.8A	295VA	575VA
	DC220V	1.4A	2.9A	280W	630W
	DC110V	2.1A	5.2A	250W	550W

## Shunt release (F)

Can disconnect the circuit breaker by remote operation.

Power Consumption Table of Shunt Release

Rated insulation voltage(Ui)	Rated control supply voltage(Us)	Closed current		Instantaneous power	
		VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)	VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)
400V	AC380V/AC400V	1A	2.1A	360VA	780VA
	AC220V/AC230V	1.3A	2.8A	295VA	575VA
	DC220V	1.4A	2.9A	280W	630W
	DC110V	2.1A	5.2A	250W	550W

## Auxiliary contact

### Internal auxiliary contact

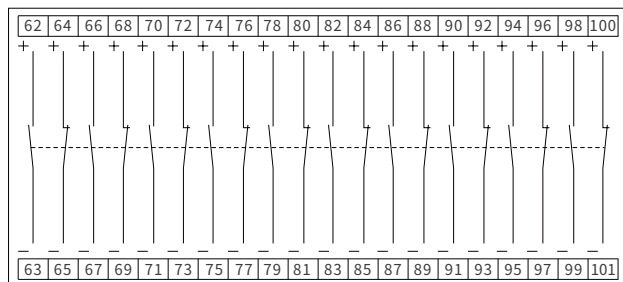

### External auxiliary contact

Min 60mm safety distance of circuit breaker after installation

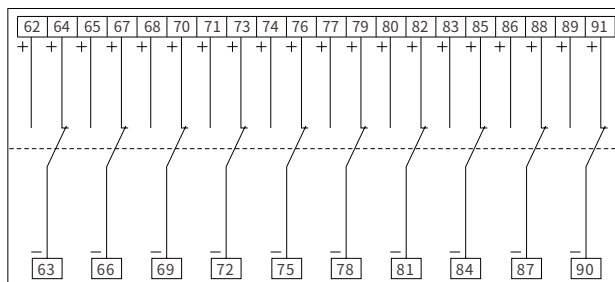

### External auxiliary contact terminal number

Without common point

With common point

H/HU/HV/Standard have Max 4NO+4NC internal auxiliary contact,if more auxiliary contact ,need the external auxiliary contact

Auxiliary contact	Rated operational voltage Ue(V)		Rated breaking capacity		Agreed thermal current I <sub>th</sub> (A)	
	AC400		800VA		16	
	AC230					
	DC220		300W			
DC110						
Type	Code		Type	Code		
3NO3NC	A33		4NO4NC	A44		
5NO5NC	A55		6NO6NC	A66		
7NO7NC	A77		8NO8NC	A88		
9NO9NC	A99		10NO10NC	A1010		
11NO11NC	A1111		12NO12NC	A1212		
13NO13NC	A1313		14NO14NC	A1414		

**Note:** 1.H/HU/HV series have 3NO 3NC~14NO 14NC  
 NO:normally open contact  
 NC:normally closed contact

## Undervoltage (loss-of-voltage) release (Q)

Rated operational voltage (V)		Undervoltage release		Loss-of-voltage release	
		AC230	AC400	AC230	AC400
Action type	Type	Code			
	Instantaneous time	Q20	Q10	S20	S10
	Delay time 1s	Q21	Q11	S21	S11
	Delay time 3s	Q23	Q13	S23	S13
	Delay time 5s	Q25	Q15	S25	S15
Action voltage (V)		(0.35-0.7) Ue		(0.1-0.35) Ue	
Guarantee the reliable closing voltage (V)		(0.85-1.1) Ue			
Not guarantee the reliable closing voltage		≤ 0.35Ue			
Power consumption		15VA			

**Note:** In thunderstorm prone areas or power grids with unstable power supply voltage, it is recommended to use undervoltage tripping with delay to prevent circuit breaker tripping due to short-term voltage drop. The delay time is generally 1S, 3S, 5S

### Undervoltage release

Rated insulation voltage(Ui)	Rated control supply voltage(Us)	Instantaneous power		Maintained power	
		VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)	VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)
400V	AC380V/AC400V	180W	115W	3.8W	3.6W
	AC220V/AC230V	148W	118W	2.4W	3.4W

### Loss-of-voltage release

Rated insulation voltage(Ui)	Rated control supply voltage(Us)	Instantaneous power		Maintained power	
		VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)	VW3-20 (S/H)	VW3-25 (H/HU/HV) VW3-40 (H/HU/HV) VW3-63 (H/HU/HV)
400V	AC380V/AC400V	650W	280W	0.43W	6.36W
	AC220V/AC230V	440W	105W	0.36W	3.24W

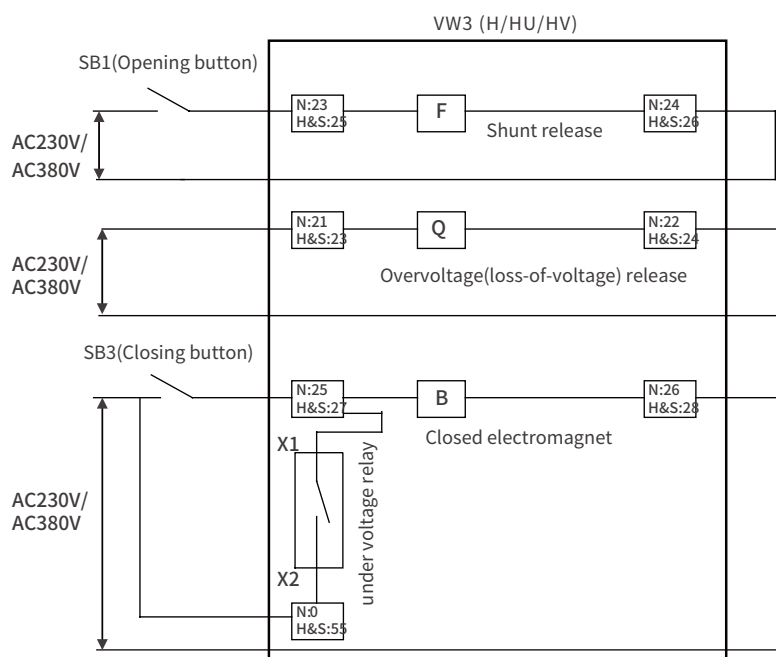

## Grid Undervoltage (loss-of voltage) release

Suitable for distributed PV low-voltage grid connection, achieving voltage loss tripping, overvoltage tripping, and automatic closing upon voltage detection.

Action value of loss-of voltage: $\leq 20\%U_e$	Action delay time of loss-of voltage: 1-10s
Action value of overvoltage: $\geq 135\%U_n$	Automatic closing voltage: (0.85-1.1)U <sub>e</sub>

**Note:** 1. X1 and X2 only send a short signal (200ms) after overvoltage(loss-of-voltage) release recover for 1 second, then the closed electromagnet act.  
2. The number in the box represents the secondary wiring terminal number. N represents the terminal number of VW3-20 (S/H) circuit breaker, and H&S represents the terminal number of VW3-25 (H/HU/HV), VW3-40 (H/HU/HV), VW3-63 (H/HU/HV).

## Lock

### Off-position key lock (SF11,SF21,SF31,SF32,SF53)

This key lock is locked on the manually disconnected position of the circuit breaker

#### Key lock :

- One lock one key (SF11): One circuit breaker with one lock and one key, and not allowed to closed when locked
- Two locks one key (SF21): Two circuit breakers with two same lock and one key, and only allowed one circuit breaker closed
- Three locks one key (SF31): Three circuit breakers with three same lock and one key, and only allowed one circuit breaker closed
- Three locks two keys (SF32): Three circuit breakers with three same lock and two keys, and only allowed two circuit breakers closed
- Five locks three keys (SF53): Five circuit breakers with five same lock and three keys, and only allowed three circuit breakers closed

## Mechanical interlocking (SR11,SR12,SR21,SY11)

Circuit figure Possible operating modes

1QF	2QF
0	0
0	1
1	0

Two interlocking cables circuit breakers or two interlocking hard rods circuit breakers

Circuit figure Possible operating modes

Mode 1: Three power supplies can only close one circuit breaker

1QF	2QF	3QF
0	0	0
1	0	0
0	1	0
0	0	1

Three circuit breaker interlocking hard rods

## Button lock (S) (The minimum safety distance 35mm between the cases)

## Door interlock (The minimum safety distance 40mm between the circuit breaker)

When the circuit breaker at the working or testing position, prohibited to open the cabinet door; The door is opened and the circuit breaker at the connected position, close the door without disconnecting the circuit breaker.

**Drawer type circuit breaker locking device at "separation" position**

When the drawer type circuit breaker at the separated position, lock the circuit breaker by pull out the rod. After locking, the circuit breaker will not be able to "test" and "connection" positions.

**Phase separator** (The minimum safety distance 180mm between the circuit breakers)

The minimum safety distance 100mm between VW3-20 (S/H), and The minimum safety distance 180mm between VW3-25 (H/HU/HV), VW3-40 (H/HU/HV), VW3-63 (H/HU/HV).

**Doorframe(M)**

Have the fixed type and drawout type, it is mainly placed on the door of the cubicle for sealing, and can make the protection level of the circuit breaker reaches IP40. It is beautiful and practical.

**Position indication(CX)** (The minimum safety distance 50mm between the circuit breakers)

With three contacts to indicate the position status of the circuit breaker (connection, testing, separation). When the circuit breaker is in a certain position, the corresponding contact will be closed.

**Power supply module** (The minimum safety distance 60mm between the circuit breakers)

AC65~500V, DC80~700V

### External neutral current transformer (N)

The TN-S distribution system use the three pole circuit breaker and requires an external neutral current transformer.  
 The earth current protection type distribution system use the three pole circuit breaker and requires an external neutral current transformer.  
 The installation cautions as follows:

1. The external neutral current transformer has a twisted pair wire with codes 6 and 7 ,connect to same terminal code of the secondary terminal
- 2.The installation direction of the external neutral current transformer depends on the wiring method of the circuit breaker:  
 If the line of the circuit breaker upper , the convex surface of the external neutral current transformer should face the neutral grounding point side;  
 If the line of the circuit breaker down , the plane surface of the external neutral current transformer should face the neutral grounding point side;
3. Current transformer type based on the width of the N-phase busbar

N1

N2

N3

N4

### External leakage current transformer

When the residual current protection function, required an external residual current transformer, and the controller does not have the ground protection function.  
 The external neutral current transformer has a twisted pair wire with codes 6 and 7 ,connect to same terminal code of the secondary terminal  
 The principle of residual current protection is shown in the following figure

#### Outline Dimension

	A	M	a
Type I	380	250	285
Type II	465	250	370
Type III	595	350	500

## Power consumption (ambient air temperature +40°C)

Power consumption is the total Power consumption which measured at the circuit breaker frame rated current  $I_{nm}$

Type	Power consumption (W)	
	Fixed type	Drawout type
VW3-20(S/H)	123.5	331.5
VW3-25(H/HU/HV)	356.8	823.4
VW3-40(H/HU/HV)	486.7	856.8
VW3-63(H/HU/HV)	787	1145

## Temperature derated coefficient

If the ambient temperature is higher than +40°C, capacity can be corrected according to the following table

Type	Rated current (A)	+40°C	+45°C	+50°C	+55°C	+60°C	+65°C	+70°C
VW3-20(S/H)	200~1250	1	1	1	1	1	1	1
	1600~2000	1	1	1	1	0.98	0.93	0.87
VW3-25(H/HU/HV)	630~2000	1	1	1	1	1	1	1
	2500	1	1	1	1	0.99	0.94	0.88
VW3-40(H/HU/HV)	1000~2500	1	1	1	1	1	1	1
	2900	1	1	1	1	1	0.96	0.94
	3200	1	1	1	1	0.94	0.92	0.90
	3600	1	1	1	0.94	0.92	0.90	0.85
	4000	1	0.95	0.92	0.89	0.85	0.85	0.80
VW3-63(H/HU/HV)	4000~5000	1	1	1	1	1	1	1
	6300	1	1	0.98	0.93	0.89	0.85	0.82

If the altitude is higher than 2000m, capacity can be corrected according to the following table

Altitude (m)		2000	3000	4000	4500	5000
Power-frequency withstand voltage(V)		5000	4500	4000	3700	3500
Rated impulse withstand voltage $U_{imp}$ (kV)		18	15	15	12	12
Correction coefficient for short-circuit breaking capacity		1	0.98	0.93	0.88	0.85
Correction coefficient for working current	VW3-20(S/H)	1	0.98	0.93	0.9	0.87
	VW3-25(H/HU/HV)	1	1	1	1	0.97
	VW3-40(H/HU/HV)	1	0.93	0.88	0.85	0.82
	VW3-63(H/HU/HV)	1	0.98	0.93	0.90	0.87

The derating correction factor is only applicable to the maximum current of the shell frame

## Copper busbar specification

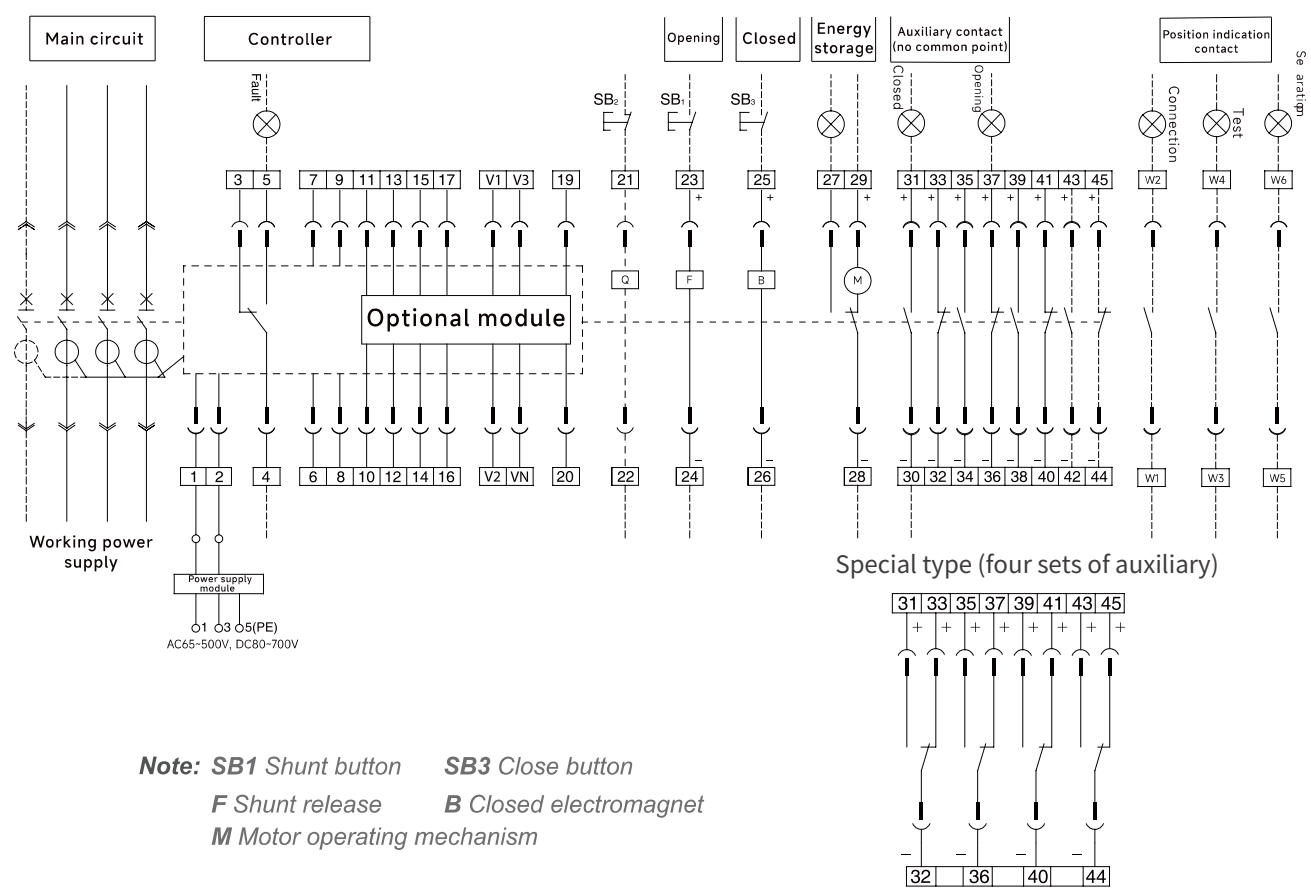

Frame size rated current $I_{nm}$ (A)	Rated current $I_n$ (A)	Copper busbar specification		
		Number of busbar		Dimension
		Horizontal wiring	Vertical wiring	
VW3-20(S/H)	≤630	1		50×5
	800	1		50×10
	1000	1		50×10
	1250	2		50×10
	1600	2		50×10
	2000	3		60×10
VW3-25(H/HU/HV)	630	2	/	80×5
	800	2	/	80×5
	1000	2	/	80×5
	1250	3	/	80×5
	1600	2	/	80×10
	2000	3	/	80×10
	2500	3	/	80×10
VW3-40(H/HU/HV)	1000	2	1	80×5
	1250	3	2	80×5
	1600	2		80×10
	2000	3	2	80×10
	2500	3		80×10
	2900	3		100×10
	3200	4		100×10
	3600	5	4	100×10
VW3-63(H/HU/HV)	4000	5	4	100×10
	5000	7	5	100×10
	6300	10	8	100×10

The table indicates the copper busbar specifications adopted when the circuit breaker is under the ambient temperature of 40°C and the open wide installation under the heating condition meets the stipulation in GB14048.2.

### Recommended screw used of outlet busbar diameter

Circuit breaker type	Outlet busbar diameter	Screws grade 8.8 (with washer)	Tightening torque
VW3-20(S/H)	Φ11	M10	50N.m
VW3-25 (H/HU/HV) VW3-40(H/HU/HV) VW3-63 (H/HU/HV)	Φ13	M12	70N.m

## VW3-20(S/H) Electrical Wiring Diagram

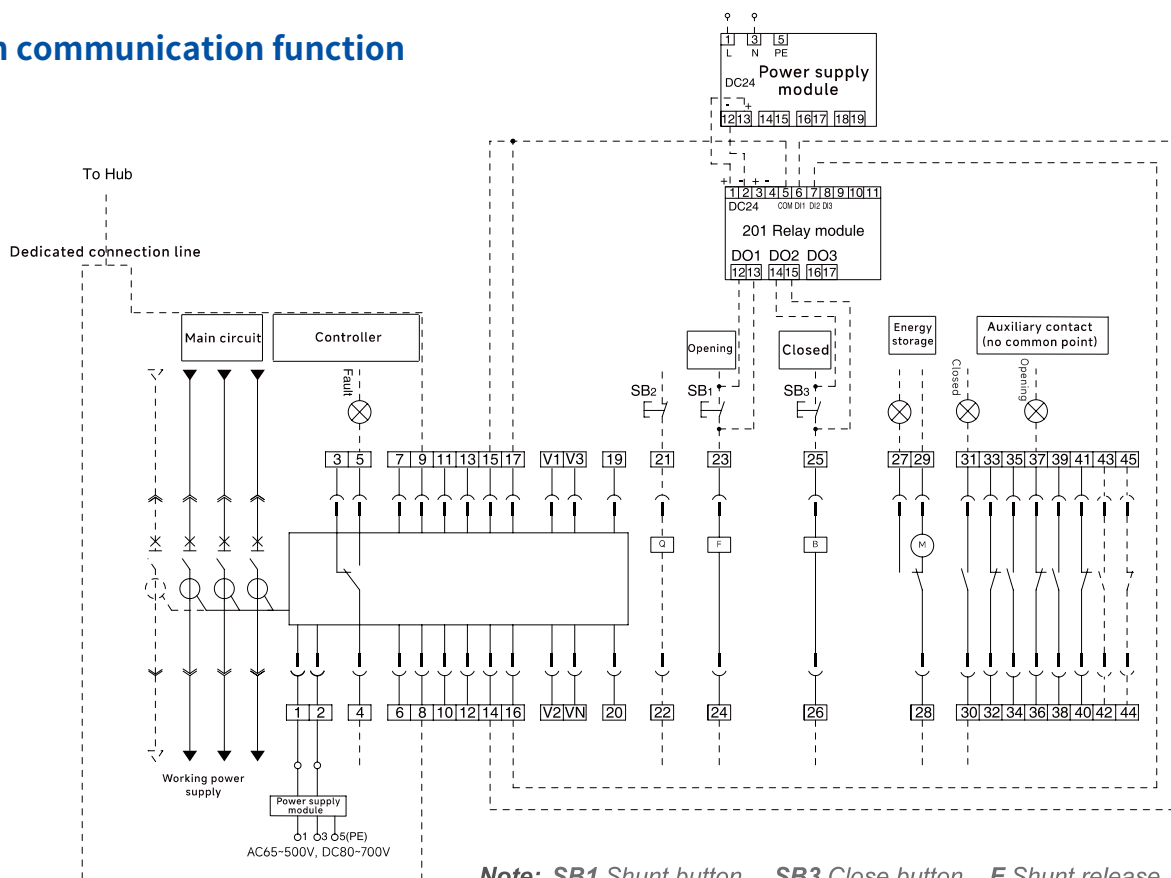

### Terminal Number

1#, 2#	Working power supply	21#, 22#	Under-voltage release or loss of voltage release
3#, 4#, 5#	Fault tripping contact output	23#, 24#	Shunt release
6#, 7#	External transformer or external leakage current transformer	25#, 26#	Closed electromagnet
8#, 9#	Communication	27#, 28#, 29#	Motor operating mechanism
10#, 11#	First contact output	30#~45#	Auxiliary contact
12#, 13#	Second contact output	V1	A-phase wiring (input voltage ≤ 230V)
14#, 15#	Third contact output	V2	B-phase wiring (input voltage ≤ 230V)
16#, 17#	Fourth contact output	V3	C-phase wiring (input voltage ≤ 230V)
19#	Communication shielded grounding wire	VN	N-phase wiring
20#	PE-phase wiring	/	/

- Note:** (1) Position contact terminal numbers W1 # -W6 # do not connect the secondary terminal  
 (2) If the control power supply voltage of F, B and M is different, connect to different power sources separately  
 (3) Terminals 29 # (VW3-20S/VW3-20H) can be directly connect to the power supply (automatic pre energy storage), or can be connect to the power supply after the normally open button (manual pre energy storage)  
 (4) Indicator light, button switch are provided by user  
 (5) Select the contact output function according to the "DO Function Setting Table" on page 42  
 (6) The above circuit diagrams is the circuit breaker in the open position.  
 (7) The shunt release coil is of the long-term energized type and defaults to the pulse type. If choose to maintain type coil, please contact the manufacturer.  
 (8) When connecting the auxiliary contact to a load, please keep the load in the same position and direction as the auxiliary contact, otherwise it may cause the auxiliary contact to burn out. Do not connect the normally closed contacts of this machine in series with the closed coil, otherwise it will cause anti bounce failure.

## With communication function

## VW3-25(H/HU/HV), VW3-40(H/HU/HV), VW3-63(H/HU/HV) Electrical Wiring Diagram

## With communication function

## Special (four sets of auxiliary)

**Note:** SB1 Shunt button    SB3 Close button    F Shunt release    B Closed electromagnet    M Motor operating mechanism

Terminal Number			
1#, 2#	Working power supply	26#	A-phase wiring (input voltage ≤ 230V)
3#, 4#, 5#	Fault tripping contact output 1	27#	B-phase wiring (input voltage ≤ 230V)
6#, 7#, 8#	Fault tripping contact output 2	28#	C-phase wiring (input voltage ≤ 230V)
9#, 10#	Remote reset	29#	N-phase wiring
11#, 12#, 13#	Close ready signal output unit	30#	PE-phase wiring
14#, 15#	External transformer or external leakage current transformer	31#, 32#	Under-voltage release or loss of voltage release
16#, 17#	Communication	33#, 34#	Shunt release
18#, 19#	First contact output	35#, 36#	Closed electromagnet
20#, 21#	Second contact output	37#, 38#, 39#	Motor operating mechanism
22#, 23#	Third contact output	40#-55#	Auxiliary contact
24#, 25#	Fourth contact output	/	/

- Note:**
- (1) Position contact terminal numbers W1 # -W6 # do not connect the secondary terminal
  - (2) If the control power supply voltage of F, B and M is different, connect to different power sources separately
  - (3) Terminals 39 # (VW3-25H/VW3-40H/VW3-63H) can be directly connect to the power supply (automatic pre energy storage), or can be connect to the power supply after the normally open button (manual pre energy storage)
  - (4) Indicator light, button switch are provided by user
  - (5) Select the contact output function according to the "DO Function Setting Table" on page 1-23
  - (6) The above circuit diagrams is the circuit breaker in the open position.
  - (7) The shunt release coil is of the long-term energized type and defaults to the pulse type. If choose to maintain type coil, please contact the manufacturer.

# Size and Connection

When users install the circuit breaker into the cabinet, the safe distance between the circuit breaker and the cabinet is shown in the figure below, and the installation dimensions are shown in the table below.

Drawout type circuit breaker

Fixed type circuit breaker

unit: mm

Installation type of the circuit breaker	To the insulator		To the metallic body grounded safely		To the live part	
	A	B	A	B	A	B
Drawout type	0	0	0	0	60	60
Fixed type	0	0	0	0	60	60

**Note:** 1. The safety distance of the fixed circuit breaker should consider the space required to remove the arc extinguishing chamber of 150mm;

# VW3GZ

DC Disconnect

- Tailored for solar energy and energy storage systems
- Rated working voltage DC500~1500V
- With high breaking capacity up to 100kA
- Multiple patented arc-extinguishing designs ensure
- lower temperature rise

## Ambient conditions

---

### Operating ambient temperature/storage temperature

- Recommended ambient air temperature limit is -40°C~+70°C, it can reach to +70°C in a short time (within 24h), derating is required above 40°C

### Altitude conditions

- The altitude of the installation location is less than 5000m.
- Relative humidity: not exceed 50% at the maximum ambient temperature of +40°C, but higher relative humidity at the lower temperature, for example, 90% at 20°C. Special measures should be taken considering the dew on product surface due to temperature change.

### Pollution grade

- Level 3

### Salt spray grade

- GB2423.18 - Extreme Grade 2
-

Maintain power consumption(W)		4	3.27	3.5	3.3	3.4	3.6	3.24	6.36

## Accessories for VW3GZ-16: Motor operating mechanism (D)

The DC disconnect has the function of motor driven energy storage and automatic energy restoring.  
(Manual energy storage can also be done)

Rated control supply voltage $U_s$ (V)	AC230	AC400	DC110	DC220	DC24
Operation voltage	(85%-110%) $U_s$				
Operating power	80VA		80W		
Starting power	400VA		400W		
Energy storage time(s)	$\leq 5$				
Motor type	Brush motor				

## Closed Electromagnet (B)

After storing energy, closed electromagnet may make the energy release instantly so that the DC disconnect is closed quickly.

Power Consumption Table of Closed Electromagnet

Rated insulation voltage ( $U_i$ )	Rated control supply voltage ( $U_s$ )	Closed current	Instantaneous power
		VW3GZ-16	VW3GZ-16
400V	AC380V/AC400V	1.5A	600W
	AC220V/AC230V	2.2A	500W
	DC220V	2.2A	500W
	DC110V	2.5A	270W
	DC24V	2.5A	60W
Operating voltage	(85%-110%) $U_s$		
Minimum time of power on	100ms $\pm$ 10ms		
Action time (ms) Switching response time in $U_s$	<50ms		

## Lock

### Off-position key lock (SF11, SF21, SF31, SF32, SF53, SF22)

Opening position lock can lock the OFF button of the switch disconnecter on the pressed position. After the opening position lock is chosen by the users, we would install and configurate.

#### Application method:

One lock one key (SF11): One DC disconnecter with one same lock and one key, and only allowed to closed when locked.

Two locks one key (SF21): Two DC disconnecters with two same locks and one key, and only allowed one DC disconnecter closed.

Three locks one key (SF31): Three DC disconnecters with three same locks and one key, and only allowed one DC disconnecter closed.

Three locks two keys (SF32): Three DC disconnecters with three same locks and two keys, and only allowed two DC disconnecters closed.

Five locks three keys (SF53): Five DC disconnecters with five same locks and three keys, and only allowed three DC disconnecters closed.

Double interlock (SF22): With two different sets of keys and locks.

## Phase separator

Phase separators are vertically installed between wiring boards of DC disconnecter which strengthen insulation.

## Accessories for VW3GZ-40: Motor operating mechanism (D)

The circuit breaker's spring charging is accomplished by a motor-operated mechanism, featuring both motor-powered energy storage and automatic recharging functions (manual charging is also available). It has no overvoltage protection capability. The device can withstand 1.4Us for 1 second, but prolonged energization may cause burnout. The mechanism can operate 100 cycles at 1.4Us with a maximum frequency of once every 3 minutes.

project	Parameters					
Rated control voltageUs	AC230	AC400	DC110	DC220	DC24	AC110
Operational voltage	(0.85-1.1) Us					
Operating power	150W					
Starting power	500-600W					
Energy storage time (s)	≤5s					
Type	Brushed Motor					

## Closed electromagnet (B)

The closing solenoid is primarily composed of a coil, iron core assembly, and electronic components. When energy storage is completed and the closing operation is ready, energizing the closing solenoid enables instantaneous release of the stored energy in the operating mechanism, causing rapid closure of the circuit breaker. The shunt trip device has no overvoltage protection function. It can withstand 1.4 times the rated control supply voltage (1.4Us) for 1 second. Prolonged energization may cause burnout. The device is capable of 100 operations at 1.4Us with a maximum operating frequency of one operation per 3 minutes.

Rated Insulation Voltage (Ui)	VW3GZ-40		
	(Us)	Pickup Inrush Current	Pickup Inrush Power
400V	AC230V	2.9A	575VA
	AC400V	2.1A	780VA
	DC110V	5.2A	550W
	DC220V	2.9A	630W
	DC24V	11A	264W
	AC110V	5.2A	550VA
Operating Voltage	(0.85-1.1)Un		
Movement time (ms)	<50ms		

## Lock

### Off-position key lock (SF11, SF21, SF31, SF32, SF53, SF22)

The open-position lock secures the trip button in the depressed position. When selected by the customer, we will install and configure it. Usage method:

(1) key lock:

One lock one key (SF11): One DC disconnecter with one same lock and one key, and only allowed to closed when locked.

Two locks one key (SF21): Two DC disconnecters with two same locks and one key, and only allowed one DC disconnecter closed.

Three locks one key (SF31): Three DC disconnecters with three same locks and one key, and only allowed one DC disconnecter closed.

Three locks two keys (SF32): Three DC disconnecters with three same locks and two keys, and only allowed two DC disconnecters closed.

Five locks three keys (SF53): Five DC disconnecters with five same locks and three keys, and only allowed three DC disconnecter closed.

(2) Double interlock (SF22): With two different sets of keys and locks.

## Phase separator

## Phase separator

Installed vertically between the terminal blocks of the fixed part of a fixed-mounted DC disconnect, it enhances the insulation strength at the busbar connection points and prevents arc propagation into the breaker's interior.

## Model Explanation and Encoding Rules

### Connection of Ground Terminal

It should be cleaned before grounding of the fixed type DC disconnector. And connect the PE wire to grounding bar of the switchgear by M12. The area of wire refers to the following table.

Cross-sectional area of phase wire ( mm <sup>2</sup> )	Corresponding protective conductor ( minimum cross-sectional area of PE ( mm <sup>2</sup> ) )
35 < S ≤ 400	S/2
400 < S ≤ 800	200
S > 800	S/4

### Temperature derated coefficient

The temperature and altitude correction factors for VW3GZ-16 and VW3GZ-40 can be referenced according to the following table:

If the ambient temperature is higher than +40°C, capacity can be corrected according to the following table.

Type	Rated current(A)In	+40°C	+45°C	+50°C	+55°C	+60°C	+65°C	+70°C
VW3GZ-16	200-1250	1.0	1.0	1.0	1.0	1.0	1.0	1.0
	1600	1.0	1.0	1.0	1.0	0.98	0.93	0.87
VW3GZ-40	6300-2500	1.0	1.0	1.0	1.0	1.0	/	1.0
	2900	1.0	1.0	1.0	1.0	1.0	/	0.96
	3200	1.0	1.0	1.0	1.0	0.94	/	0.92
	3600	1.0	1.0	1.0	0.94	0.92	/	0.9
	4000	1.0	0.95	0.92	0.89	0.95	/	0.85

### Altitude correction coefficient

Type	Project	Parameters				
VW3GZ-16	Altitude	2000	3000	4000	4500	5000
	Power frequency withstand voltage(V)	5000	4500	3500	/	2200
	Rated current(A)	1.0In	0.9In	0.8In	/	0.6In
	Rated working voltage(V)	DC1000 DC1500	DC1000 DC1500	DC1000 DC1500	/	DC1000 DC1500
	Rated Insulation voltage(V)	1600V	1600V	1600V	/	1600V
VW3GZ-40	Working current(A)	1.0In	0.9In	0.88In	0.85In	0.82In
	Breaking capacity	1.0	0.98	0.93	0.88	0.85

## Copper busbar specification

Frame size rated current $I_{nm}$ (A)	Rated current $I_n$ (A)	Copper busbar specification		
		Number of busbar		Dimension
		Horizontal wiring	Vertical wiring	
VW3GZ-16	≤630	1		50×5
	800	1		50×10
	1000	1		50×10
	1250	2		50×10
	1600	2		50×10
VW3GZ-40	630	2	1	80×5
	800	2	1	80×5
	1000	2	1	80×5
	1250	2	1	100×5
	1600	2	1	100×5
	2000	3	2	100×5
	2500	4	3	100×5
	2900	3	2	100×10
	3200	4	3	100×10
	3600	5	4	100×10
	4000	5	4	100×10

**Note 1:** The table shows that the DC disconnect is installed in an open environment with a maximum ambient temperature of 40 °C and meets the copper bar specifications specified in GB/T 14048.3 for heating conditions. If the temperature exceeds 40 °C, the breaking capacity should be reduced or the number of copper bars should be increased.

**Note 2:** The maximum allowable temperature for copper bars should not exceed 110 °C.

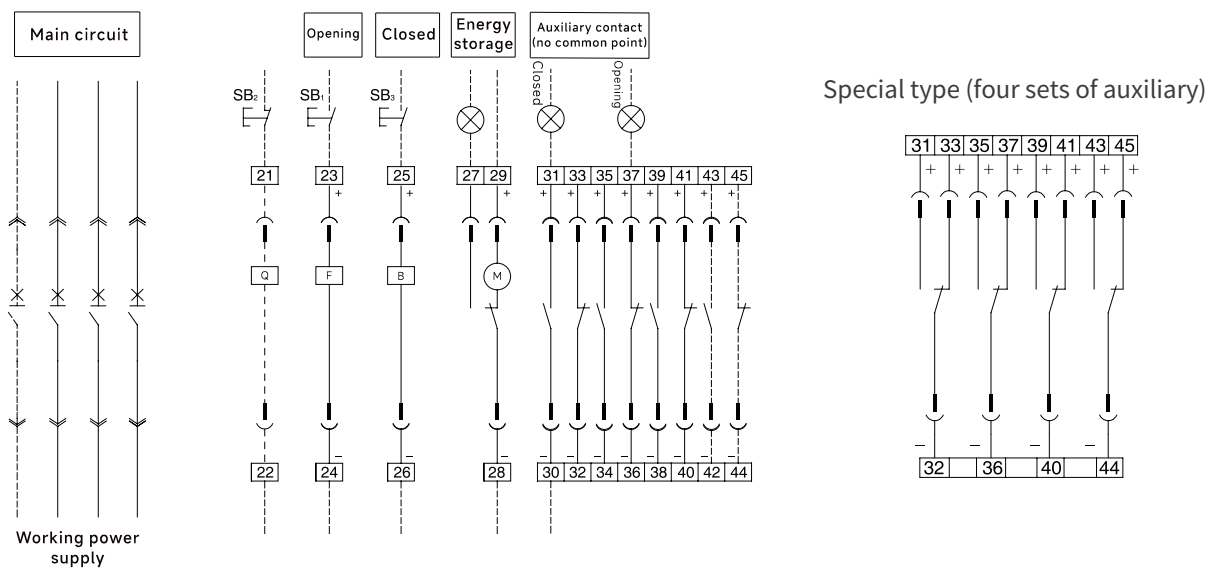

### Recommended screw used of outlet busbar diameter

Switch Disconnecter type	Outlet busbar diameter	Screws grade 8.8 (with washer)	Tightening torque
VW3GZ-16	Φ11	M10	50N.m
VW3GZ-40	Φ13	M12	70N.m

### Wiring method for copper bars

# Size and Connection

The selection of switchgear in DC systems mainly considers the following aspects:

- Rated working voltage, considering the number of series connected poles for disconnection
  - Rated current, considering load power
  - Grounding system method
- a. Three pole series isolation switch - B-type wiring method  
 b. Four pole series isolation switch - C-type wiring method

## Recommended wiring method for VW3GZ-16 DC disconnect

**Note:** If directly connected in parallel or series with the busbar, the continuous load of the isolating switch can only be 80% of the maximum operating current due to heating reasons. If parallel or series connections are made at a distance of 1 meter from the busbar, the switch disconnecter can operate at full load.

## Recommended wiring method for VW3GZ-40 DC disconnect

When users install the DC disconnecter into the cabinet, the safe distance between the DC disconnecter and the cabinet is shown in the figure below, and the installation dimensions are shown in the table below.

**Fixed type DC disconnecter**

unit: mm

Fixed type	To the insulator		To the metallic body grounded safely		To the live part	
	A	B	A	B	A	B
VW3GZ-16	0	0	0	0	60	60
VW3GZ-40	0	0	0	0	80	80

**Note:** The safety distance for fixed switches should consider a space of 40mm required to remove the arc extinguishing chamber;

Please fill in numbers in, and check  in

Other requirements		

# VM3

Molded Case Circuit Breaker

- Tailored for solar energy and wind power
- With higher breaking capacity
- With excellent anti damp heat and dew solidification capabilities
- Working voltage up to 1000V
- Strong ability to adapt to alternating changes in high and low temperatures
- High altitude adaptability

## Ambient conditions

### Operating ambient temperature/storage temperature

- Operating environment temperature: -40 °C~+70 °C, with an average value of no more than +35 °C within 24 hours
- Storage temperature: -40 °C~+75 °C

### Altitude conditions

- Altitude of installation site  $\leq$  2000m (Over 2000 meters need capacity reduction for using)

### Pollution level

- Level 3

### Protection level

- Product protection level: IP20

### Installation Category

- Class II (load) and Class III (distribution and control)

### Installation Environment

- The product is installed in a medium without explosion risk, and the medium is not sufficient to corrode metal, there is no gas that damages the insulation layer of the product, there is no conductive dust, and it should be avoided from being used in places invaded by rain and snow

### Environmental requirements

- The product meets RoHS standards

### Example

#### **VM3-250HUL250/TMF/3/AX/SHT (AC230)**

Meaning: VM3 series circuit breaker; the frame level is 250A; breaking capacity is 30kA, 3 poles; rated current is 250A; fixed type wiring on front of the board; accessory contains auxiliary contact and shunt release with voltage (AC230V).

**Notice:** 1. HU type only provides front wiring of 3P.

# Main Characteristic

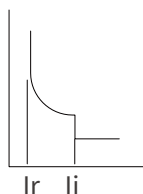

## TMF Protection unit

DC-13	1.1	1.1	-	6 × Pe	1.1	1.1	-	6 × Pe	10	6	≥ 0.05s

- Note:** 1.  $T_{0.95}=6Pe$  is an empirical formula in which the unit of "Pe" is watt and the unit of  $T_{0.95}$  is millisecond.  
 2. The number of operation of Auxiliary contact can equal to that of the circuit breaker, if the number of operation of circuit breaker is less than 6050.  
 3. The operation frequency and power-on time of an auxiliary contact are allowed to be the same as those of the main circuit.  
 4. If  $T_{0.95}$  is more than 0.05s, the power-on time is at least  $T_{0.95}$ .

Shunt release (SHT)

Shunt release (SHT)

Function

Shunt release refers to the device which disconnect circuit breaker with current from a distance. A shunt release can cut off the signal circuit automatically after tripping.

Operating Characteristics

Voltage specification	AC50Hz: 110V 230V 400V DC: 24V 110V 220V
Operating characteristics	When the operation voltage is 70%~110% of the rated control voltage, the shunt release should trip the circuit breaker reliably.

Connection diagram (internal accessories of a circuit breaker)

K is a microswitch closed contact of micro switch installed in series with the coil in shunt tripper, when the breaker is tripping, the switch is off by itself, when the breaker is closing, and then the switch is on.

Under-voltage release (UVT)

### Under-voltage release (UVT)

#### Function

Under-voltage release is a device which can automatically disconnect the circuit breaker when voltage is reduced.

#### Operating characteristics of the under-voltage release

Rated operational voltage	AC400V AC230V
Operating Characteristics	When the operation voltage is 70%~110% of the rated control voltage, the under-voltage release should trip the circuit breaker reliably.
	When the working voltage is 85%~110% of the rated voltage, the under-voltage release should make the circuit breaker switch on.
	When the working voltage is less than 35% of the rated voltage, the under-voltage release should prevent the circuit breaker from being switched on.

#### Wiring diagram of under-voltage release module (the internal accessories of circuit breaker are depicted in the dotted area)

#### Under-voltage release power meter

Equipped with circuit breaker type	Under-voltage release power	
	AC230V	AC400V
VM3-630 (Thermal-magnetic)	0.75	0.75

*Before switch on a circuit breaker, the undervoltage release must be electrified otherwise the circuit breaker may be damaged.*

## Electrical accessories (TMF)

### Combined mode of electrical accessories

- Alarm switch
- Auxiliary switch
- Shunt release
- Under-voltage release
- Output lead direction

Accessory code	Accessory name	Model

AX+UVT	Auxiliary contact and under-voltage release	/	
AX+AL+SHT	Auxiliary contact, alarm contact and shunt release		
AX+AL+UVT	Auxiliary contact, alarm contact and under-voltage release	/	

**Note:** 1.If there is need to learn about the instructions of installation of accessories of a 4 poles circuit breaker, please contact with the manufacturer;  
 2.If there is need for a UVT, a voltage module for the UVT is needed firstly(no voltage module is needed for a SHT).  
 3.The standard installation of a SHT is the left pole installation, UVT is the right pole installation, please note if there is any special request.  
 4.AL module of a VM3-630 product is special supply for the right pole installation, please contact with the manufacturer

## Control accessories

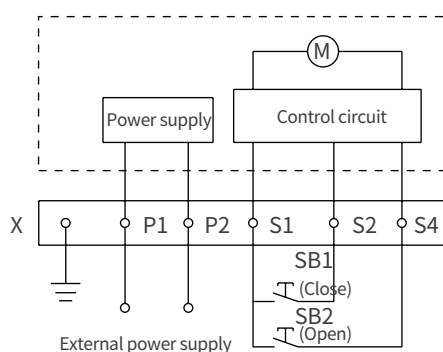

Motor-operated mechanism (CD2)

## Motor-operated mechanism (CD2)

Motor-operated mechanism which consists of an energy storage spring, an opening coil and a closing coil is used to control a circuit breaker from a distance. And a CD2 Motor-operated mechanism has the following features: CD2 type electric operating mechanism has

- The operation mode, manual or automatic mode, can be chosen.
- Hand drive handle is in front of a face cover.

The wiring diagram of a CD2 motor-operated mechanism is shown as following (internal accessories are indicated in the dotted square)

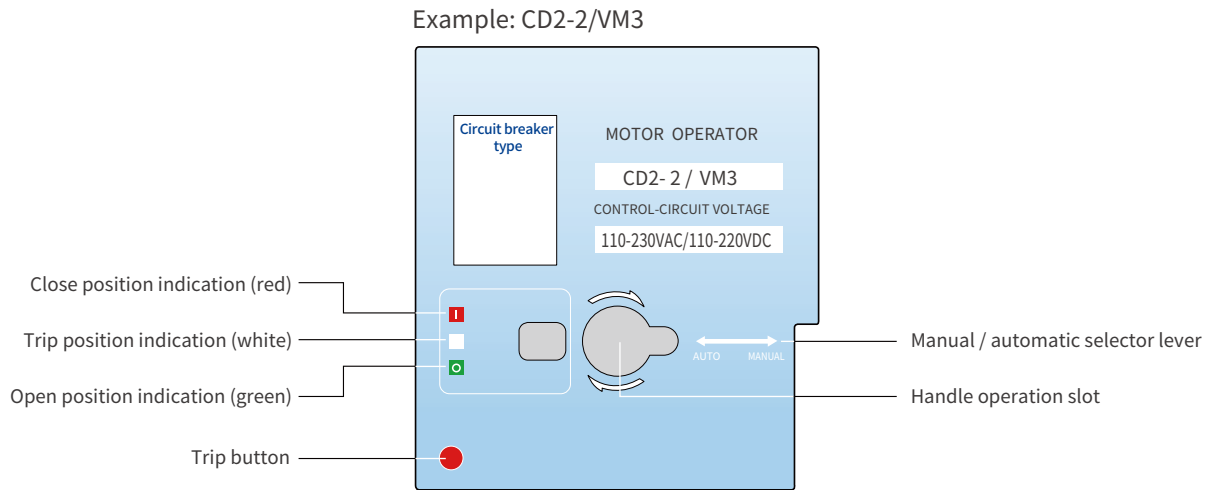

## Manual operation

- The internal power supply is automatically closed, if the switch is operated to "manual" position.
- Put the handle into the slot in the front of an electric operating mechanism and then turn in a clockwise direction.
- Do not turn it in a counterclockwise direction.

## Electric operation

- Auto connection
- Operating frequency should be no more than 3 times per minute.
- Using ON/OFF switches in the frequency range.
- Please do not input ON/OFF signal during automatic operation.
- Under-voltage release accessory(UVT) need to be applied a rated voltage before electric operation, if a Under-voltage release accessory(UVT) is mounted in a circuit breaker.

Motor-operated mechanism appearance

Acting Current, Motor Power and Longevity of CD2 type Power-driven Operating Mechanism

Equipped with circuit breaker type	Electric operating mechanism type	Control voltage	Starting current(A)	Response time(ms)		Power consumption	Durability
				Closed	Disconnect		
VM3-630 (Thermal-magnetic)	CD2-3	AC 110V/230V/400V DC 110V/220V/24V	≤ 0.5	500	350	14	10000

**Note:** After the circuit breaker trips, power-driven operating mechanism has to make the circuit breaker recamped, then it can be turned on.

### Rotary handle operator (CS1、CS2、CS3) \*

With the unique design and transmission mechanism, the rotary handle operator can make the circuit breaker open, close and lock the tripping part by turning the handle.

**Note:** Rotary handle operator CS1、CS2、CS3 types details as P2-21 show

### CS series rotary handle operator has the following features:

- Equipped with circular and square rotary operating handles.
- The panel sheet of the cabinet cannot be opened when the circuit breaker is on (i.e interlock with the door).
- The handle can related supporting drawers, and interlock with the drawer unit.
- If fault of the operation handle occurs during its closing state, the panel sheet can be opened by operating the emergency reliever.
- Extended rotary handle can be used and the length of the extension handle is determined according to the distance between the rotary handle and the door. The shortest and the longest are 150mm and 500mm

### Classification

The rotary handle mechanism contains central type and eccentric type.  
The rotary handle contains R type(circular) and F type(square).

Connecting rod

F-type square handle

R-type round handle

## Insulation accessories

### Phase separator

- The insulation strength can be enhanced by phase separators.
- It can be installed from a slot of a switch after the switch is mounted.
- It can be used with all the other accessories except long and short covers.

1. The standard configuration of CS1 and CS2 type rotating handle is R type and the length of square shaft is 200mm which connects rotary handle and the operating mechanism. Please specify if you have special requirement.
  2. For three pole and four pole circuit breakers, rotating handles have the same parameters.
  3. VM3-250 hand aperture dimensions refers to F1, R1 and VM3-630 aperture dimensions refers to F2, R2.

# VM5

Molded Case Circuit Breaker

- Tailored for solar energy and wind power
- Working voltage up to 1000V
- With ultra-high breaking capacity
- With excellent anti damp heat and dew solidification capabilities
- Strong ability to adapt to alternating changes in high and low temperatures
- With thermal and magnetic adjustability

## Ambient conditions

### Operating ambient temperature/storage temperature

- Operating environment temperature: -40 °C~+70 °C, with an average value of no more than +35 °C within 24 hours
- Storage temperature: -40 °C~+75 °C

### Altitude conditions

- Altitude of installation site  $\leq$  2000m (Over 2000 meters need capacity reduction for using)

### Pollution level

- Level 3

### Protection level

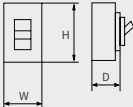

- Product protection level: IP20

### Installation Category

- Class II (load) and Class III (distribution and control)

### Installation Environment

- The product is installed in a medium without explosion risk, and the medium is not sufficient to corrode metal, there is no gas that damages the insulation layer of the product, there is no conductive dust, and it should be avoided from being used in places invaded by rain and snow

## Control accessories

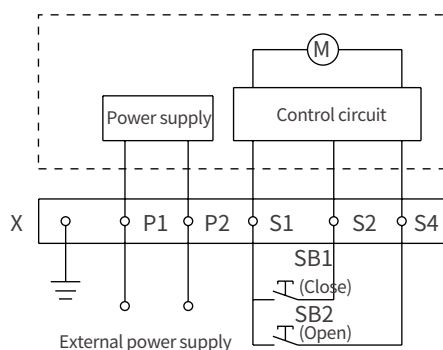

Motor operator mechanism (CD3)

## Motor operator mechanism (CD3)

Motor-operated mechanism which consists of an energy storage spring, an opening coil and a closing coil is used to control a circuit breaker from a distance. And a CD3 Motor-operated mechanism has the following features: CD3 type electric operating mechanism has

- The operation mode, manual or automatic mode, can be chosen.
- Hand drive handle is in front of a face cover.

The wiring diagram of a CD3 motor-operated mechanism is shown as following (internal accessories are indicated in the dotted square)

## Please pay attention to the following two points when wiring:

1. When the lead out distance of the electric control line is  $\leq 5$ m, a regular electronic line can be used as the controller, but it needs to be routed separately from the power line;
2. When the lead out distance of the electrical control line is  $\geq 5$ m or there is a possibility of strong electromagnetic interference in the surrounding environment, the control line should be shielded or connected to the control end (S1, S2, S4) of the electrical control through an intermediate relay installed near the electrical control, and the distance between the relay and the electrical control should not exceed 5m;

## Manual operation

- The internal power supply is automatically closed, if the switch is operated to "manual" position.
- Put the handle into the slot in the front of an electric operating mechanism and then turn in a clockwise direction.
- Do not turn it in a counterclockwise direction.

## Electric operation

- Auto connection
- Operating frequency should be no more than 3 times per minute.
- Using ON/OFF switches in the frequency range.
- Please do not input ON/OFF signal during automatic operation.
- UVT need to be applied a rated voltage before electric operation, if a UVT is mounted in a circuit breaker.

Motor-operator mechanism appearance

Acting Current, Motor Power and Longevity of CD3 type Power-driven Operating Mechanism

Equipped with circuit breaker type	Electric operating mechanism type	Control voltage	Starting current(A)	Response time(ms)		Power consumption	Durability
				Closed	Disconnect		
VM5-320HU	CD3-2	AC 110V/230V/400V DC 110V/220V/24V	$\leq 0.5$ $24VDC \leq 2$	$\leq 700$	$\leq 700$	14	10000
VM5-630HU	CD3-3	AC 110V/230V/400V DC 110V/220V/24V	$\leq 2$ $24VDC \leq 5$	$\leq 1000$	$\leq 1000$	35	5000

**Note:** After the circuit breaker trips, power-driven operating mechanism has to make the circuit breaker recamped, then it can be turned on.

## Rotary handle operator (CS1)

With the unique design and transmission mechanism, the rotary handle operator can make the circuit breaker open, close and lock the tripping part by turning the handle.

### CS series rotary handle operator has the following features:

- Equipped with circular and square rotary operating handles.
- The panel sheet of the cabinet cannot be opened when the circuit breaker is on (i.e interlock with the door).
- The handle can related supporting drawers, and interlock with the drawer unit.
- If fault of the operation handle occurs during its closing state, the panel sheet can be opened by operating the emergency reliever.
- Extended rotary handle can be used and the length of the extension handle is determined according to the distance between the rotary handle and the door. The shortest and the longest are 150mm and 500mm

## Safety distance and installation diagram for VM5-320HU

Safety distance

Minimum distance between two adjacent circuit breakers

**Note:** There are 8 phase separators as standard, the top is short and the bottom is long, When the number of circuit breakers installed side by side is  $\geq 2$ , please keep the installation position of the interphase clapboard of the side phase consistent (all installed on phase A side or phase C side), 1 long and 1 short (phase separator) should be added for the side phase of the circuit breaker close to the metal cabinet.

Short terminal shield rear connected

Minimum distance between circuit breaker and front panels

# VB2

Miniature Circuit Breaker

- Quick closing ensures reliable operation and extends the lifetime of circuit breakers
- The temperature-rise of the product itself is lower
- Rated impulse withstand voltage up to 6.0kV
- Tunnel type wiring structure and busbar type wiring structure, reliable and fast wiring
- Modular and modular structure, can be combined arbitrarily

## Ambient conditions

### Operating ambient temperature/storage temperature

- Operating environment temperature:  $-40\text{ }^{\circ}\text{C}\sim+70\text{ }^{\circ}\text{C}$ , with an average value of no more than  $+35\text{ }^{\circ}\text{C}$  within 24 hours
- Storage temperature:  $-40\text{ }^{\circ}\text{C}\sim+80\text{ }^{\circ}\text{C}$

### Altitude conditions

- Altitude of installation site  $\leq 2000\text{m}$  (Over 2000 meters need capacity reduction for using)

### Damp heat resistance

- Category 2 (at a temperature of  $55\text{ }^{\circ}\text{C}$  and a relative humidity of 95%)

### Pollution level

- Level 2

### Protection level

- Product protection level: IP20

### Installation Category

- Class II (load) and Class III (distribution and control)

### Installation method

- Installed on  $\text{TH}35\text{mm} \times 7.5$  (EN50022) Standard Guide

### Installation Direction

- Vertical installation of the product, with an inclination of  $\leq \pm 5^{\circ}$  between the installation surface and the vertical surface
- Horizontal installation

### Environmental requirements

- The product meets RoHS standards

# VB2-63 Characteristic Curve

VOZWEI

## B curve

Protection against loads with small short circuit currents (e.g., non-inductive or micro-inductive circuits)

**Trip characteristics:**

The instantaneous trip range is  $3I_n \sim 5I_n$

**Base temperature:**

+30°C

## C curve

Protection of conventional loads and distribution circuits

**Trip characteristics:**

The instantaneous trip range is  $5I_n \sim 10I_n$

**Base temperature:**

+30°C

## D curve

Protection of impulse loads with large starting current (e.g., motors, transformers, etc.)

**Trip characteristics:**

The instantaneous trip range is  $10I_n \sim 14I_n$

**Base temperature:**

+30°C
